This measure assesses whether the participant prefers smaller immediate rewards over delayed larger rewards. The Monetary-Choice Questionnaire is a 27-item self-administered questionnaire. For each item, the participant chooses between a smalle immediate monetary reward and a larger, delayed monetary reward. The protocol is scored by calculating where the respondent's answers place him/her amid reference discounting curves, where placement amid stee curves indicates higher levels of impulsivity. For more information about the Monetary-Choice Questionnaire, please.	er, The Se Seper
questionnaire. For each item, the participant chooses between a small immediate monetary reward and a larger, delayed monetary reward. The protocol is scored by calculating where the respondent's answers place him/her amid reference discounting curves, where placement amid stee curves indicates higher levels of impulsivity. Monetary-Choice Questionnaire	
For each of the next 27 choices, please indicate which reward you wo prefer: the smaller reward today, or the larger reward in the specified of days.	
1. Would you prefer \$54 today, or \$55 in 117 days?	
[] smaller reward today	
[] larger reward in the specified number of days	
2. Would you prefer \$55 today, or \$75 in 61 days?	
[] smaller reward today	
Protocol: [] larger reward in the specified number of days	
3. Would you prefer \$19 today, or \$25 in 53 days?	
[] smaller reward today	
[] larger reward in the specified number of days	
4. Would you prefer \$31 today, or \$85 in 7 days?	
[] smaller reward today	
[] larger reward in the specified number of days	
5. Would you prefer \$14 today, or \$25 in 19 days?	

[] smaller reward today
[] larger reward in the specified number of days
6. Would you prefer \$47 today, or \$50 in 160 days?
[] smaller reward today
[] larger reward in the specified number of days
7. Would you prefer \$15 today, or \$35 in 13 days?
[] smaller reward today
[] larger reward in the specified number of days
8. Would you prefer \$25 today, or \$60 in 14 days?
[] smaller reward today
[] larger reward in the specified number of days
9. Would you prefer \$78 today, or \$80 in 162 days?
[] smaller reward today
[] larger reward in the specified number of days
10. Would you prefer \$40 today, or \$55 in 62 days?
[] smaller reward today
[] larger reward in the specified number of days
11. Would you prefer \$11 today, or \$30 in 7 days?
[] smaller reward today
[] larger reward in the specified number of days
12. Would you prefer \$67 today, or \$75 in 119 days?
[] smaller reward today
[] larger reward in the specified number of days

13. Would you prefer \$34 today, or \$35 in 186 days?
[] smaller reward today
[] larger reward in the specified number of days
14. Would you prefer \$27 today, or \$50 in 21 days?
[] smaller reward today
[] larger reward in the specified number of days
15. Would you prefer \$69 today, or \$85 in 91 days?
[] smaller reward today
[] larger reward in the specified number of days
16. Would you prefer \$49 today, or \$60 in 89 days?
[] smaller reward today
[] larger reward in the specified number of days
17. Would you prefer \$80 today, or \$85 in 157 days?
[] smaller reward today
[] larger reward in the specified number of days
18. Would you prefer \$24 today, or \$35 in 29 days?
[] smaller reward today
[] larger reward in the specified number of days
19. Would you prefer \$33 today, or \$80 in 14 days?
[] smaller reward today
[] larger reward in the specified number of days
20. Would you prefer \$28 today, or \$30 in 179 days?
[] smaller reward today

[] larger reward in the specified number of days
21. Would you prefer \$34 today, or \$50 in 30 days?
[] smaller reward today
[] larger reward in the specified number of days
22. Would you prefer \$25 today, or \$30 in 80 days?
[] smaller reward today
[] larger reward in the specified number of days
23. Would you prefer \$41 today, or \$75 in 20 days?
[] smaller reward today
[] larger reward in the specified number of days
24. Would you prefer \$54 today, or \$60 in 111 days?
[] smaller reward today
[] larger reward in the specified number of days
25. Would you prefer \$54 today, or \$80 in 30 days?
[] smaller reward today
[] larger reward in the specified number of days
26. Would you prefer \$22 today, or \$25 in 136 days?
[] smaller reward today
[] larger reward in the specified number of days
27. Would you prefer \$20 today, or \$55 in 7 days?
[] smaller reward today
[] larger reward in the specified number of days
Scoring

A participant's discounting curve may be calculated according to the following function:

$$V = A/(1+kD)$$

V is the present value of the delayed reward A at delay D, and k is the rate of discounting. k typically falls between 0.0 and 0.5, with smaller values indicating a lack of discounting and preference for delayed rewards and higher values indicating strong discounting and a preference for immediate rewards. Thus higher values of k are indicative of high levels of impulsivity.

There are two ways of scoring the Monetary-Choice Questionnaire. The first involves hand scoring to get an estimate of k following the guidelines given in Kirby (2000). The second involves fitting a logistic regression function to individual responses following procedures described in Wileyto et al. (2004).

Estimating Discounting Rate

The following table lists the calculated *k* values (the degree of discounting) at indifference for each question (i.e., when the subjective value of the immediate and delayed rewards are equivalent).

Question	k at indifference
13	.00016
1	.00016
9	.00016
20	.00040
6	.00040

Selection Rationale:	Delayed Reward Discounting has been shown to be moderately associated ($d \sim .4$ 6) with a broad range of addictive behaviors and can predict initiation of substance use (MacKillop et al., 2011; Audrain-McGovern et al., 2009). The Monetary Choice Questionnaire has been shown to be temporally stable, has been used with adolescents, and is highly correlated ($r = 0.82$) with computer-based experimental methods.							
	An estimate of the respondent's discounting rate can be calculated as the geometric mean (to avoid underweighting) of the <i>k</i> at indifference between two questions that reflect when the respondent changes between choosing delayed reward versus the immediate reward. In cases where the responder change between preferring the delayed versus the immediate reward is not consistent, the two questions that are most proportional to their responses chosen. If the participant always chooses the immediate reward or the delayer reward, the estimation of <i>k</i> is equal to one of the endpoints (0.25 or 0.000).						e between the choosing the respondent's ard is not esponses are rethe delayed
